SUMMARY

Versatile Software Engineer with expertise in developing Full-Stack applications complete with back-end APIs, relational database, and React user client. Proven leadership abilities with a team-oriented, results-focused approach. Quick learner, ready to adapt and excel in dynamic environments and uplift others.

TECHNICAL SKILLS

Back-end Technologies: JavaScript, Python, SQL, Node.JS, Express, Flask, Postgres

Additional Technologies: HTML, CSS, TypeScript, Git, Jest

Software/Standards: JWT, Adobe, Figma, MS Office, Google Suite

EXPERIENCE

Freelance - Web Developer

December 2024 – Present

Self-employed

- Developed a website using Hostinger and HTML to add additional functionalities not incorporated into the hosting site.
- Consistently communicated with client and partner in new changes and additional development.
- Collaborate with a partner using Figma to design the layout of the website in order to bring out the best interest and desires of our client.
- Built a dynamic music player to integrate client's music using Spotify API to improve visitor experience.

Software Engineer - Trainee

July 2023 – June 2024

Springboard

- Completing 800+ hours of hands-on coursework, worked closely with an expert mentor, and completion of multiple projects
- Deployed two full-stack web applications, 10+ sub-projects, conducted code reviews, implemented new functions, and committed 70+ git repositories of various problem solutions
- Implemented unit and integration tests, adhering to TDD principles to ensure bug-free, optimized applications using frameworks such as: Jest, Jasmine, and Unittest
- Conceptualized then developed 2 full-stack projects utilizing various technologies: Flask, React, PostgreSQL, NodeJS, Express
- Project: (Appose)** A social network web application that uses text sentiment analysis API to automatically link user posts of opposing sentiment to visually compare different users' contradictory opinions. Utilized data caching and an automatic data relational system to link user posts. Includes JWT authentication for user login
- Project: (KitchenFinds)** A find by *list of ingredients* recipe React web-application providing recipes on users' left-over fridge content. Using a back-end API for authentication, and to send recipes and user information allowing users to save and view recipes.

Lead Lab Technician

Feb. 2022 – Feb. 2024

Flow Health

Culver City, CA

- Proactively decreased inventory waste by 15% by automating and streamlining the inventory system using Sheets, App Script, and JavaScript, giving management real-time visibility of more than 500 laboratory supplies.
- Collected, processed, and visualized data to provide management with insights and solutions regarding equipment malfunctions.
- Improved laboratory performance by composing/revising over 20+ laboratory protocols, reports, and logs essential for standard operations
- Managed and scheduled for a team of 8 employees, ensuring company compliance, team efficiency, and moral.
- Resolved mechanical and technical issues by analyzing error data, conducting tests, and delivering reports.

SOFTWARE DEVELOPMENT PROJECTS

Portfolio Website | *React, JavaScript* | manguray.com

- Using React and Javascript to create a portfolio showcasing projects, blogs, and other interests.

URL Shortener | *React, JS, Express, NodeJS, PostgreSQL, JWT, Google API*

- Built a full-stack URL shortening service with secure JWT authentication and Google reCAPTCHA to prevent abuse.
- Designed RESTful APIs and optimized Postgres schema for efficient URL management and temporary user data.
- Developed a responsive React frontend ensuring seamless user experience for URL creation and redirection.

EDUCATION

Springboard

Software Engineering Certification

July. 2023 – July 2024

University of California, Santa Cruz

Santa Cruz, CA

B.S. Molecular, Cellular, and Developmental Biology

Sep. 2015 – June 2020
